C3 Emptying Bags

Non-Sterile, 2L, CleanPak™

Curas C3 Emptying Bags are specifically designed for emptying urine from close system bags (CSB) and urine measurement systems. Unlike any reusable jug or plastic container, it allows the disposing of urine in a hygienic and safe manner. Curas C3 Emptying Bag is highly recommended for the demanding and complex patient situation. The C3 bags are intended to help reduce the risk of infection by providing a closed connection during the emptying of urine. The two various of Flexi-Funnel™ are designed to fit perfectly to the bottom outlet of any CSB and standard urine drainage bag. SAP by Curas™ is incorporated in C3 bags for urine crystallization absorption; thus, ensuring safer disposal of urine.

- Innovative & practical
- Ward Pak™ dispensing box
- Minimise risk of cross infection
- Safe & convenient disposal of urine
- Flexi-Funnel™ ensures excellent closed connection
- Suitable for cytotoxic waste handling

Patent Pending

C3

Spigot

Prevents accidental spillage during transportation.

Cross-Hanger™

Secure placement of bag on the patient's closed system bag.

Flexi-Funnel™

Fits all common cross valves' bottom outlet.

Marked Slit Cut

For easy disposal of bag content.

Non-Return Valve (NRV)

Prevents reflux of urine and contaminants.

Double-Sealed

Provides extra strength and prevent leaks.

ml-Graduation Marking

Measuring down to 25ml and allows clear and easy reading of urine collected.

*Patent Pending

Patient Name & ID Box

Writing space for patient name and identification.

SAP by Curas™

Rapidly absorbs liquid and transforms into non-spill gel.

WardPak™

Dispensing inner box allows easy access of individual bag and saves storage space.

C3 Emptying Bag Compatibility

Product in Illustration is REF 20460

Vomit Bag (Emesis)

A leading Innovator in the field of fluid absorption, the range of medical consumables from our partner Curas® provides a safe and advanced solution for the convenient and simple way to manage vomitus and liquid waste (e.g. emesis) in a discreet and hygienic manner. Strong and deep bag capacity prevents overflow while printed graduation marks facilitate indication of approximate volume. The unique "Twist & Lock "feature on the rim secures the bag content and contains odour for easy disposal.

The application of the Sap by Curas™ raw material inside the vomit bags significantly improves the compliance in the field of nosocomial control. The Sap by Curas™ option crystallizes the liquid on contact for safer handling of contaminated waste by healthcare professionals. Easy to use, with patient comfort and hygiene a priority, the range of Curas® products from MMS Medical are fast becoming the products of choice for healthcare professionals in Ireland.

FEATURES & BENEFITS

- Safe and economical alternative to using traditional emesis basins (e.g. kidney dish).
- Wide opening fits over patient's mouth, eliminating spill-over and reducing clean-up costs.
- Practical, discreet, easy to use and conveniently manage sickness related to gastrointestinal tract, chemotherapy, motion, food poisoning, etc.
- SAP by Curas™ (Ref: 03051) crystallizes liquid on contact for safer handling of contaminated waste.
- Each vomit Bag (Ref: 03051) contains one sachet of SAP by Curas™ for spill & odour prevention
- Hard plastic rim makes it easy to hold and handle, thus reducing risk of contamination.
- Strong and deep bag with 1.5L capacity prevents overflow.
- Printed graduation marks for indication of approximate volume.
- "Twist & lock" feature on the rim secures bag content and contains odour for easy disposal. Bag printed with simple, illustrated instructions for use.
- Bag is latex-free and PVC-free.

- Helps to reduce HAIs

- Increases convenience for nursing staff

- Improves patient comfort

- Cost effective

Hygiene Pulp™

A patient and staff friendly solution

Proper patient care is a high priority for all healthcare employees. A comprehensive range of patient friendly Hygiene Pulp™ is now available from Curas and it provides many benefits to healthcare workers and patients throughout the world.

Disposable Urine Bottles

Curas urine bottles come in various designs and sizes meant for male and female users, in a design that allows the urinals to be placed on the floor safely without spilling over. In fact, the high-capacity 1.5L urine bottle also functions as an emptying bottle for urine bags. Nurses can easily access the urinals from the unique dispensing carton, without being compromised by a dirty utility room access. Also available is the range of rust-free stainless steel dispensing racks to hold the carton firmly on the wall, and individual urine bottle holders to hang onto the bed-frame. SAP by Curas™ is included with the range of Curas products to prevent accidental spills and improve waste handling.

The risk of cross contamination is real and significantly increased when using re-usable alternative, irrelevant of how carefully they are washed and decontaminated. By contrast, our hygiene pulp products provide improved standards of care and help to eliminate HAIs (Hospital Acquired Infections).

Wash Basins

Curas offers two types of detergent-proof high capacity 2L, 3L and 4L bowls specially for bed-bathing. Users can choose either the disposable medical pulp-based basin with soap/detergent proof additives for up to 2 hours of use, or hold warm water for more than 4 hours. The alternative is the general bowls series that comes with our Hygiene Control Bags™ system, which is completely water resistant and with enhanced surface integrity. Both allow for clean water supply and safe disposal of the contaminated wipes etc.

Kidney Trays/Dishes, Emesis Bowls

Curas Hygiene Pulp™ includes the all-important kidney tray, which is manufactured in accordance with Medical Device Directives – Class 1, and is vastly used in all areas of healthcare. The products have passed microbiological testing and safe for sterilization. Our unique delivery system ensures safe use of the product in both medical and surgical wards, whilst mitigating risk of infection. The unique RoomPak™ and WardPak™ systems (with barcodes) provides convenience to the user; as it delivers the product in a clean, dust free manner and allows for quick handling and allocation within the hospital setting.

Besides being single use, hygiene pulp products provide extra comfort and safety to both patients and staff. In fact, each hygiene pulp product costs less than the total cost of handling, washing and sterilizing the re-usable alternatives made from either steel or plastic. Switching to the Curas disposable pulp range provides you extra safety and convenience, at no extra cost.

Bed Pan Liners

The disposable bedpan liners can be used together with the disposable pulp support product, with or without the Hygiene Control Bag™ and SAP by Curas™ for safe handling and disposal. The use of this unique combination is ideal for high risk or quarantined patients, as it helps to limit the spread of HAIs (Hospital Acquired Infections). Similarly, the pulp slipper pan series can also be used with Curas plastic slipper pan support at the general ward, and patients with reduced mobility.

General Bowls

General Purpose bowls come in 1L, 2L and 3L sizes; suitable for holding liquid contents, vomitus or oral cleaning. Additionally, all disposable bowls come with a wide and firm rim that allows for easy holding, and fits perfectly on commode chairs and thus, reduces the risk of contamination. All bowls come with graduated marks embossed for clear measuring of the content, and the entire general bowl series is supplied with a range of lids for extra protection.

The diverse range means you can use our Hygiene Pulp™ products to carry out a wide variety of procedures. The range provides great versatility for nursing staff. Products are easily stored and can be effectively disposed according to clinical waste management procedures. Good insulating properties of the product mean water is kept warm and comfortable to use.

Measuring devices

As depicted in its name, the measuring devices come with graduation marks embossed clearly on each product. The various measuring cups and jugs allow the required amount of liquid or sample content to be measured and transported. The wide edge of the mid-stream urine sampling device allows hygienic urine collection, as it fits most toilet bowls. The jugs as well as other measuring devices, support clean urine collection from urine bags, stoma bags etc. Patients using intermittent or ileostomy solutions will also benefit from these disposable options.

Pure Fibre Deep Trays

The disposable deep trays are made of 100% pure fibre. It is water resistant, environmentally friendly and compostable. Each product has been exposed to UV rays for additional hygiene control. The sterile and non-sterile fibre trays are used in various applications, specifically at the ward level, isolation wards, ICU and in the operating rooms. It is used for holding & transporting drugs, syringes, and IV therapy sets. Furthermore, hospitals will have the benefit of making their own procedure sets by using these disposable deep trays, as they are clean and can be easily sterilized at local sterilizing facilities.

Anxiety amongst patients is a real factor in the healthcare environment and this can be reduced by using our Hygiene Pulp™ range of products.

Digital Scales

Curas digital scales are specially designed for weighing the many Curas Hygiene Pulp™ products, and other medical items. The illuminated LCD display allows for easy reading and the smooth surface stabilizes the pulp product placement. It has multiple indicators such as; overload, low voltage, unstable and negative weight to alert the user. As an additional feature for clinical users; Curas has a unique design of digital scales which provides illustrative descriptions of key Hygiene Pulp™ products, to enable nursing and clinical staff to work in a safe and efficient manner.

Re-usable and Plastics Support

Lightweight, but strong and very durable Plastic Pan Supports are used to improve durability and hygienic handling of pulp pan liners. It can be cleaned in automatic washer disinfectors or hand washed. To further mitigate risk of contamination, the disposable bed pans can be used along with the Hygiene Control Bag™ draped over the reusable plastic supports. Curas products are known for their high-quality finish, allowing for easy disinfection and safe re-use, subject to local protocol including the sterilization option. The range is designed for an accurate fit with corresponding Hygiene Pulp™ products and strengthen the disposable paper liner when used in situations where the patient or users body weight must be supported.

100% Recycled Material
100% Biodegradable
No Colour Added

Patients prefer hygienic pulp products for many reasons. It is always comforting for a patient to know that no other contamination could have taken place before using the dish, bowl or tray. Cold and rigid stainless steel alternatives are significantly less comfortable to handle and use. In comparison, the pulp material is always clean, smooth and easy to use. In addition, pulp products are biodegradable, and made of recycled paper with no added coloring.
