# HOP TRIKES - Rehabilitation bikes

Hop Trikes are rehabilitation tricycles specifically designed for people whose medical conditions prevent them from moving on a traditional two-wheeled bicycle. They are not only a safe means of transport and a form of rehabilitation for children and adults, but above all fun to use and independent.

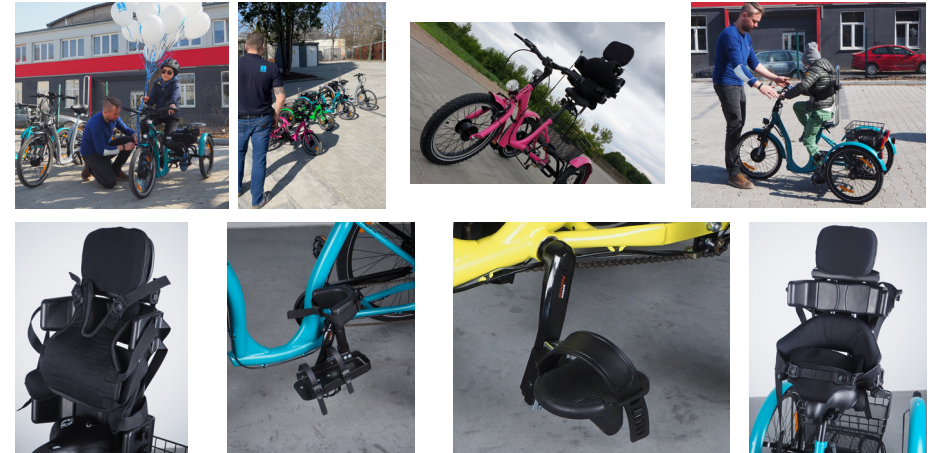

All bike sizes come with a wide range of standard equipment: a lowered frame profile for easier entry, Shimano gears, full LED lighting and a basket.

AVAILABLE IN COLOURS

SIZE/ MODEL	User height	Max user weight
Model HOP 16"	from 105 cm	up to 40 kg
Model HOP 20"	from 120 cm	up to 60 kg

Model eHOP 24"	from 135 cm	up to 80 kg
Model eHOP 26"	from 150 cm	up to 100 kg

## IMPORTANT FEATURES

Each Hop Trikes bike is individually configured to the needs of the future user. This guarantees a suitable selection of accessories:

- Drive: fixed wheel, freewheel, electric support
- Special handle to guide the bike
- Different steering models
- Different models of saddles and pedals
- Specially designed accessories for stabilising and securing the pelvis, chest and lower limbs

In addition, rehabilitation at home is made possible by a special stand thanks to which Hop Trikes have the function of a stationary bicycle.

The eHop electrically assisted bike have as standard:

- Parking brakes
- Battery-powered LED lights
- Computer with monochrome display
- Indicators and stop light
- Electric signal
- Battery providing a range of up to 80 km\*

\*The actual range depends on the weight of the user and the selected level of support.
